ENGLISH EDITION

Polin introduced a new project in the water slides segment: "Magic Spheres"

Polin

Polin – in the meantime Europe's leading water slide manufacturer with its head office in Turkey – has developed a very interesting water slide. The "Magic Sphere" has a diameter of 20 metres in which four-seat rubber boats slide around at a 32° angle, completing horizontal rotations as well as vertical experiences, before travelling into another slide course through an opening. Special effects as well as lighting elements (that at Polin would be sensibly brought about by ecological incidence of light) can be adapted as a part of, or the complete opening of the spherical orb. The ground area of a "Magic Sphere" is 48 by 48 metres. A smaller variation for two-seat tubes is the

"Spheres". This attraction has the same features, but only has a diameter of six metres, which reduces the ground space to eleven by seven metres. Additionally, a number of "Spheres" can be put in a row and be combined with other slide elements.

These and all other slides from Polin – in 2011 there were 150 newly installed attractions – have been completed in 48 brilliant PAL-colours, which due to the special RTM fabrication, can withstand strong

❑ The "Spheres" water slides from Polin can be combined with other elements or with one another
