## Two New Slides at Aqua Splash, Marineland, France

*In spring 2009, two new slide attractions from Polin have been installed at Aqua Splash Waterpark belonging to Marineland at the French Riviera: "Turbo Lance" and "Space Boat". Both slides belong to Polin's Extreme Slide Series and are accessible via the same 13.5-metre tall start tower. The Turbo Lance starts with a Black Hole changing into the Flying Boats part where the rider experiences a steep drop down, propelled uphill vertically. Then the rider comes to the Wave Slide where he finds himself on a reverse path taking him over a bump and finally ending into a splash pool. The Space Boat also starts with a Black Hole and then continues with a bowl part. On both slides, tubes for one or two persons can be utilized. The Black Holes, the starting parts of both slides, are RTM (Resin Transfer Moulding) manufactured. This specific compression process during the production creates perfectly shiny and smooth finishes on the slide surfaces. The Space Boat is even manufactured with so-called "Natural Light Effects", meaning that the natural daylight goes through the slide and creates colourful effects inside the tunnel slide when combined with the water flowing through it.*

*Oder nach rechts in das Space Boat?*

*Kubilay Alpdogan, Eija Tervo und Emin Berk Baltaoglu (v.l.n.r.) von Polin präsentierten unter anderem die neue Rutsche „Dragero“ erstmals der Öffentlichkeit.*
